

Sea Turtle Nesting in Southeast Asia

scale: 1:30,000,000 projection: Eckert IV, central meridian 110E data: The SWOT team and reviewed literature (see pp. 54-57 for citations); Ocean Basemap - Esri, DeLorme, GEBCO, and NaturalVue.

notes: 1. Black squares denote data that are older than 10 years, are unquantified, or are zero. 2. There were no sites with 5,001-10,000 nests reported. 3. Historical nesting for loggerhead turtles was reported for the region, but recent nesting was unconfirmed, so the species was not included in this map.
