

# SWOT Data Citations

We are grateful to all who generously contributed their sea turtle data for inclusion in the maps on pp. 29 and 32–33. For information about how the maps were created, please the sidebar on p. 31.

## GUIDELINES OF DATA USE AND CITATION

The data that follow correspond directly to the maps on p. 29 and pp. 32–33. In the case of nesting data, every data record is numbered to correspond with its respective point on the map. To use data for research or publication, you must obtain permission from the data provider(s).

## Nesting Data Citations

### DEFINITIONS OF TERMS

**Clutches:** A count of the number of nests of eggs laid by females during the monitoring period. **Nesting females:** A count of nesting female turtles observed during the monitoring period. **Year:** The year in which a given nesting season ended (e.g., data collected between late 2015 and early 2016 would be listed as year 2016).

Nesting data are reported from the most recent available nesting season or as averages for the years reported. Beaches for which count data are not available or were not reported are listed as “unquantified.” Additional metadata are available for many of the data records and may be found online at <http://seamap.env.duke.edu/swot> or by viewing the original data source (if published).

# Telemetry Data Citations

The following data records refer to satellite telemetry datasets from tags that were deployed on olive ridley turtles worldwide. These records were combined to create the map on pp. 32–33. The data are organized by country of deployment. For information regarding data processing and filtering, see the sidebar on p. 31. These data were generously contributed to SWOT by the people and partners listed subsequently. Records that have a SWOT ID can be viewed in detail in the SWOT online database and mapping application at <http://seamap.env.duke.edu/swot>, which contains additional information about the projects and their methodologies.

To save space, we have used the following abbreviations in the data source fields: (1) “STAT” refers to Coyne, M. S., and B. J. Godley. 2005. Satellite Tracking and Analysis Tool (STAT): An integrated system for archiving, analyzing, and mapping animal tracking data. *Marine Ecology Progress Series* 301: 1–7. (2) “SWOT Database Online” refers to Kot, C. Y., E. Fujioka, A. DiMatteo, B. P. Wallace, et al. 2015. The State of the World’s Sea Turtles Online Database. Data provided by the SWOT Team and hosted on OBIS-SEAMAP. Oceanic Society, IUCN Marine Turtle Specialist Group, and Marine Geospatial Ecology Lab, Duke University. <http://seamap.env.duke.edu/swot>. (3) “OBIS-SEAMAP” refers to Halpin, P. N., A. J. Read, E. Fujioka, B. D. Best, et al. 2009. OBIS-SEAMAP: The world data center for marine mammal, sea bird, and sea turtle distributions. *Oceanography* 22 (2): 104–115. When listed, these sources indicate that the dataset was contributed online through STAT, SWOT, or OBIS-SEAMAP.
