

meet the turtles

The seven sea turtle species that grace our oceans belong to an evolutionary lineage that dates back at least 110 million years. Sea turtles fall into two main subgroups: (a) the unique family *Dermochelyidae*, which consists of a single species, the leatherback, and (b) the family *Cheloniidae*, which comprises the six species of hard-shelled sea turtles.

Kemp's ridley
Lepidochelys kempii

CR

Olive ridley
Lepidochelys olivacea

VU

Hawksbill
Eretmochelys imbricata
